

Honest. Thorough. Analysis.

Mechanical & Electrical Forensic Engineers
Working With Clients Nationwide

Nationwide Reach. Individual Attention.

When it comes down to it, we spend our days traveling the country to figure out why something failed. While it sounds simple, it often is not since what may seem obvious is not the cause, but a repercussion of the core reason the failure occurred. We look beyond what is apparent to isolate the definitive source. This is one of the reasons why our clients count on us to give them answers that will provide a solid case should an issue proceed to litigation.

Because of our years of experience, we are better able to pull on past experience and work more efficiently, which also means more economically. We believe in communicating frequently so you never wonder where your case is or when you can expect an answer. This includes sending progress reports on more complicated cases and responding quickly when you have a question. As business owners ourselves, we understand your need to know the status of your case and do everything we can to provide you with accurate, thorough answers within budget and in a timely manner.

The best forensic engineers are those imbued with an innate sense of curiosity and a commitment to get to the bottom of every issue. Founders, Frank Young and Joslyn Hopmayer, love solving puzzles and providing efficient and thorough answers for their clients each and every time.

They also come to the table with decades of mechanical, electrical and plumbing experience, so while each engagement is unique, they've probably seen something similar before. They focus on the details, but don't get lost in the weeds, always providing the answers needed in reports that are thorough yet easy to read.

Detailed Analysis That Delivers The Answers Clients Need

We provide an unbiased investigation and analysis, as well as expert testimony when needed, of the mechanical, electrical and plumbing issue causation for insurance adjusters, manufacturers, attorneys and contractors.

We Look Forward to Working with You
